

DVA

The accessibility devices of the electoral system “**vot.ar**” have been developed in cooperation with the Argentine Federation of Institutions of Blind and Amblíopes (FAICA for its name in Spanish).

Accessible Voting Device

The innovations achieved, are not only reflected in the solutions for voting machines but also in the creation of devices that have been used in Argentina's national elections, to ensure that citizens with visual impairment can vote with complete autonomy, respecting their right to maintain the secrecy of their vote.

ACRYLIC KEYBOARD

The **vot.ar machine** has an **acrylic keyboard** that rests on the screen and **allows the visually impaired person to vote**. In this case, the system is executed in an **audible and private** way, with the use headphones, so that the voter can follow the instructions of the system.

SYSTEM AUDIBLE/PRIVATE
